**STATE OF HAWAII - DEPARTMENT OF PUBLIC SAFETY  
INMATE COMPLAINT/GRIEVANCE**

(THIS CONTROL NO. MUST  
ACCOMPANY ALL APPEALS)

FILE

DATE 3/19/03  
RECEIVED MGR.  
1945-1128

NAME: William Sangster Aholelei SSN: 575-98-5526

HOUSING ASSIGNMENT: mod 2 - A block quad 2 CONTROL NO.: 90373/90374

TO: (STEP) 1. Section Supervisor/Inmate Grievance Specialist SID: A0416949  
2. Appeal Branch/Core Program Administrator/Inmate Grievance Specialist  
3.  Appeal Institutions/Core Program Division Administrator/Inmate Grievance Specialist

I attempted to solve this problem through informal discussion/resolution by contacting:

NAME: Nurse on Duty DATE: 3-19-03

**RESPONSE:** \_\_\_\_\_

RE: Complaint/Grievance Against: \_\_\_\_\_

**STATEMENT OF COMPLAINT/GRIEVANCE:** (attach additional sheets as necessary) This Grievance No. 90375 is m  
Step 3 Appeal Grievance Regarding denial of adequate medical care. Step 1, grievance no. 90373 has been filed on 2-14-03 and Step 2 grievance no. 90374, has been filed 2-28-03 both STEP 1 and STEP 2 grievances returned wi  
nswers indicating that care is appropriate which statement is not true and unconstitutional and leaves me no choice other than to file my final grievance and seek help thru  
I.C.C.P then Court procedure. Since being incarcerated from Nov-2000 till now I have bee  
complaining about my Chronic Sinus problems which causes me tremendous pain and hard ti  
keeping. Despite of my ongoing request to see a specialist all I received was seen by the nur  
se and received 500mg tablets. My last 2 Medical request seeking help regarding my sinus proble  
ee medical request Doc CYSO filed 3-5-03 and 3-11-03 which came back indicating that I have i  
een by the nurse regarding this matter which indicate to me that they knowingly disregard my  
offering by not allowing me to see a qualify or specialty doctor concerning chronic sinus p  
blems which is unconstitutional and denial of adequate medical care, Pursuant to Section 4  
-03 (4-a) of the depart of public Safety Policies and Procedures manual (1992). In Nov-  
had my first Lazer ureteroscopy operation done which was not adequate to remove all  
my Kidney Stones. And again on Feb-6-2003 that same surgery was performed on me, a  
re of the pain and suffering I had to go thru after the procedure it wasnt adequate to  
up my Kidney Stone problem. Because Dr Kuchenberger does not have proper authority  
from someone at the medical unit to performed the proper treatment of Shock wave,  
remove all my kidney Stones. After my last Surgery was completed on Feb-28-03 DR Ku  
chenberger prescribe me 2 medication one was for the pain and the other is a medica  
ion to prevent me from having kidney stones which the facility is still deriving from havin  
g a grievance, is made pursuant to that fact of denial of adequate medical care, Pursuant to SEC 493-12-1  
-00 of the department of public Safety Policies and procedures manual (1992) before I take the matter  
I.C.C.P and Court Pursuant to the Case cited as *Scotth v. Churner*, 531 V.S. 456 (2001) and *Ancala v. Paris*  
*Health Services Inc.* 769 F.2d 700, 704-05 (11th cir. 1985) (Refusal to provide specialty consultations  
without a court orders)

COMPLAINT/GRIEVANCE WOULD BE SOLVED TO MY SATISFACTION IF: That I received adequate medical care and DR Kuchenberger to performed the proper procedure(shock wave) and get rid of all my kidney stones. Allow me to see a specialist about my Sinus problem and allow the doctor to treat me as required. Give me the medication that my doctor recommended. Also have to prevent me from having kidney stones. And take care of all my medical needs or release me, so that I may seek help on my own or I'll go to M.C.C.P then Court.

I reviewed your chart today and discussed your care with Drs. Paderes and Saldana at our weekly SURP meeting. You have 2 complaints, one regarding your chronic sinusitis, and the other regarding care for your kidney stones.

**Sinusitis:** On 3/20/03, Dr. Paderes prescribed a new steroid nasal spray for you that will likely improve your sinuses. It may have taken a while to get it from our pharmacy, since Diamond was in the process of changing from one steroid nasal spray to another. We will re-evaluate you after a month of using this new spray and see if you are doing any better.

**Kidney stones:** This has been a painful and serious problem for you. We are following Dr. Kuchenbecker's recommendations. You have received both medications that he recommended to decrease your chance of making more stones. He plans to see you back in 3 months (from 2/26/03) with a repeat CT prior to that visit to check on the status of the stones. If he sees no resolution of the problem, he will then schedule you for lithotripsy.

CT ABDOMEN W/O IV CON 23504031

Diagnosis:

CHRONIC HEMATURIA W/POSSIBLE RENAL STONE

History:

PROC: SPIRAL CT SCAN STONE PROTOCOL

Report dictated on 1/29/03.

CT OF ABDOMEN AND PELVIS, 1/29/03:

TECHNIQUE: No intravenous contrast was administered. Renal stone protocol was performed.

FINDINGS: The visualized portions of the liver, spleen, large and small intestine, and pancreas are unremarkable on this noncontrast CT study. The visualized lung bases are unremarkable. The bony thorax and lumbar spine demonstrates no lytic or blastic lesions.

There is severe left-sided hydronephrosis present. Multiple stones are present in the right ureter. The largest one is present in the midportion of the left ureter measuring 13.0 x 9.0 mm. A second stone is noted at the level of the sacroiliac joints on the left side measuring approximately 9.0 mm in dimension. Two smaller stones measuring 6.0 mm and 3.0 mm are noted in the distal portion of the left ureter with the smallest stone present at the ureterovesical junction. The left ureter demonstrates inflammatory changes to the level of the sacroiliac joint. Below this level, no definite evidence of ureteral dilatation or obstruction.

Multiple left and right sided renal stones are present within the collecting system. In the inferior pole of the left kidney, there are multiple stones measuring up to 7.0 mm and 9.0 mm. In the upper pole of the left kidney, there is a stone which measures 6.0 mm in dimension with a second focus of calcification measuring 1.0 mm to 2.0 mm. On the right side, there are multiple stones in the lower pole of the kidney measuring 3.0 mm and 6.0 mm in dimension respectively.

No evidence of retroperitoneal adenopathy.

Exam: 1886425 Date: 17-Oct-2002 Requested by: PADERES, SISAR, M.D.  
CT ABDOMEN W/O IV CON 23504031

Diagnosis:

hematuria, r/o kidney stone

History:

halawa inmate

Report dictated on 10/17/02.

CT SCAN OF THE ABDOMEN RENAL STONE PROTOCOL.

CLINICAL HISTORY: This is a 38-year-old male with hematuria. Please evaluate for renal calculi.

TECHNIQUE: CT scan of the abdomen was performed per renal stone protocol.

FINDINGS: There is moderate left-sided hydroureteronephrosis. This is due to a large obstructing calculus in the mid ureter which measures 7-mm x at least 1.7-cm in length. There are numerous other calculi present in the dilated left renal collecting system. One in the mid pole measures 8 x 4-mm, two tiny 2-mm calculi noted in the posterior mid pole on image #40. Three other calculi are seen in the lower pole measuring 9 x 11, 10 x 16, and 5-mm in size.

There is a 4-mm mid pole calculus, a 1-mm lower pole calculus, and a 4-mm lower pole calculus on all the right.

No perinephric or periureteral stranding is seen. The liver, pancreas, spleen, gallbladder, adrenals, and lung bases are unremarkable.

IMPRESSION:

1. LEFT MID URETERAL LARGE OBSTRUCTING CALCULUS MEASURING 7 X 17-MM IN SIZE WITH MODERATE ASSOCIATED LEFT HYDROURETERONEPHROSIS.
2. BILATERAL RENAL CALCULI AS DESCRIBED ABOVE, LEFT GREATER THAN RIGHT.
3. OTHERWISE UNREMARKABLE CT.

## CASTLE MEDICAL CENTER

**CC:** DAVID A KUCHENBECKER, M.D.

**DATE OF OPERATION:** 02/06/2003

**PREOPERATIVE DIAGNOSIS:** MULTIPLE LEFT URETERAL CALCULI.

**POSTOPERATIVE DIAGNOSIS:** SAME WITH MARKED HYDRONEPHROSIS.

**SURGEON:** Dr. David Kuchenbecker

**ANESTHESIOLOGIST:** Dr. Robert Chinn

**ANESTHESIA:** General.

**OPERATIVE PROCEDURE:** CYSTOURETEROSCOPY WITH LASER LITHOTRIPSY,  
RETROGRADE PYELOGRAMS WITH FLUOROSCOPIC  
IMAGING AND PLACEMENT OF DOUBLE J STENT.

**INDICATIONS:**

The patient is a 39-year-old gentleman with a long history of recurring renal and ureteral calculi, who presents with left flank pain and marked hydronephrosis and CT scan demonstrating multiple stones in the left ureter.

**DESCRIPTION OF OPERATION:**

The patient was taken to the Operating Suite where is placed on the table in the supine position after induction of general anesthesia, the patient was repositioned in the cystolithotomy position where he prepped and draped steriley. A 22-French Storz cystoscope was inserted under direct vision and the bladder emptied without difficulty. The left ureteric orifice was identified and cannulated with a 35 mm guide wire which is able to be manipulated along side the stones and up into the proximal dilated ureter and renal pelvis. A 6-French rigid Wolfe ureteroscope was then passed along the guide wire up to the level of the first stone. Multiple stones were present, increasing in size as progressed up the ureter. A total of four or five stones were present, each of which were laser fragment with the homeon laser into tiny fragments. After the final stone was fragmented, a pyelogram was performed through the ureteroscope showing no extravasation. Several filling defects were present in the kidneys, suspicious for residual uric acid type stones with removal of the scope. No significant size fragments were evident. The guide wire was backfed on the cystoscope an a 26 cm 6-French double J stent was passed over the guide wire, positioned fluoroscopically and the guide wire removed.
